### Block Diagram

### Derating Curve

### Static Characteristics

**Power Factor Characteristic**

Power factor will be higher than 0.9 when output loading is 50% or higher.

**Constant Current Mode**

**EFFICIENCY vs LOAD (48V Model)**

HLG-120 series possess superior working efficiency that up to 94% can be reached in field applications.

**DRIVING METHODS OF LED MODULE**

There are two major kinds of LED drive method "direct drive" and "with LED driver".

A typical LED power supply may either work in "constant voltage mode (CV) or constant current mode (CC)" to drive the LEDs.

Mean Well's LED power supply with CV+ CC characteristic can be operated at both CV mode (with LED driver, at area (A) and CC mode (direct drive, at area (B)).

Typical LED power supply I-V curve

◎ **Direct driving :**

Under direct driving, the power supply will work in "constant current mode (CC)" and output voltage of the power supply will be clamped by sum of forward voltage (V<sub>F</sub>) of the LED strip.

The total forward voltage of series connecting LEDs is suggested for 60%~95% of power supply rated output voltage due to concern of the best PF value and efficiency.

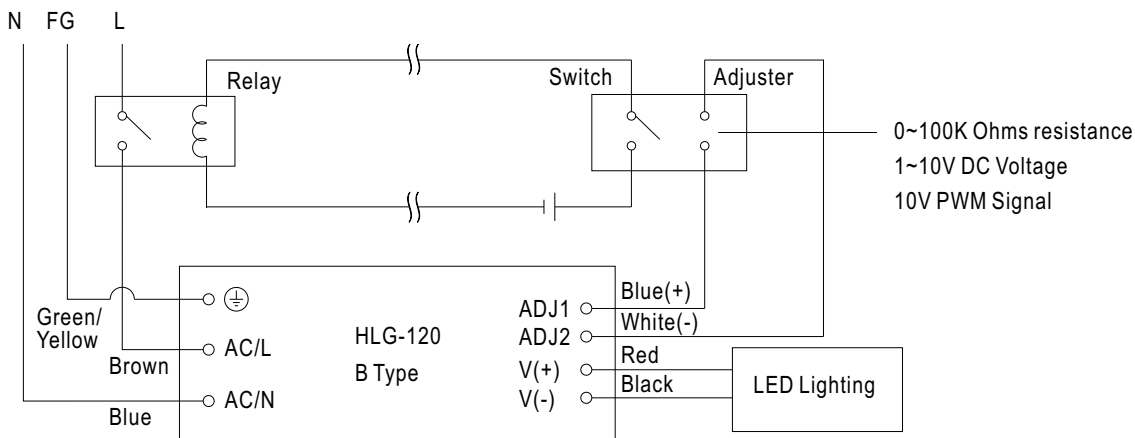

◎ **With LED driver :**

Using additional driver, the power supply will work in "constant voltage mode (CV)" and output voltage of the power supply will be kept in rated value. In this drive mode, several design issues need to be considered:

1. Output voltage of PSU must be higher than total forward voltage of series connecting LEDs by 3V minimum.
2. Input capacitor (C<sub>in</sub>) of LED driver circuit should use 47uF ~ 100uF (typ.) of rating depends on the operating frequency of the LED driver. The higher the operating frequency is used, the smaller value of C<sub>in</sub> should be chosen, and vice versa.
3. Do not use B type with LED driver.

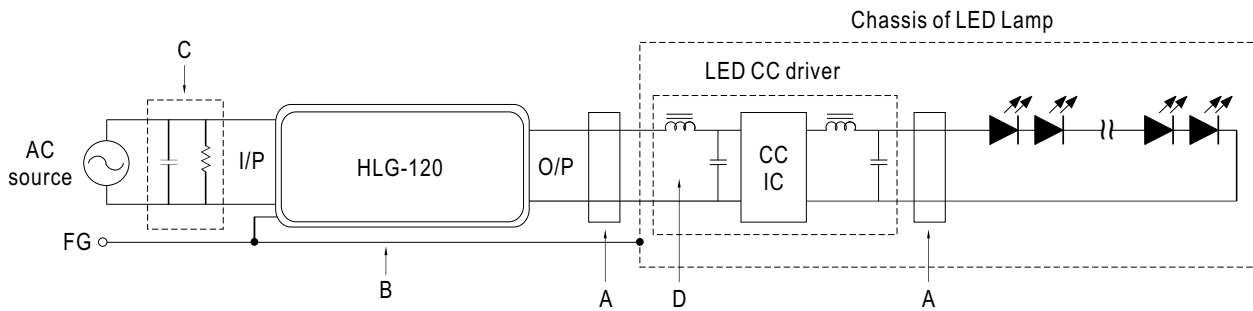

◎ **Dimming application connection diagram (for turning the lighting ON/OFF) :**

Using a switch and relay can turn ON/OFF the lighting.

1. Output constant current level can be adjusted through output cable by connecting a resistor or 1~10Vdc or 10V PWM signal between ADJ1 and ADJ2.
2. The LED lighting can be turned ON/OFF by the switch.

**EMI DEBUG SUGGESTION**

- A. Add a common mode ferrite choke on output wires to reduce the common emission between 10M ~ 300MHz per lighting EMI regulation.
- B. Chassis of LED lamp and chassis of HLG-120 or the FG wire should be connected to the safety ground to reduce the EMI noise, including the conduction and radiation emission.
- C. The additional X-Cap and discharge resistor can reduce the low frequency conduction noise between 9K ~ 1MHz per lighting EMI regulation.
- D. L-C filter should be added at the DC input of LED constant current driver to avoid the differential emission and high frequency noise generated by the CC driver.

**WATERPROOF CONNECTION**

⊙ Waterproof connector

Waterproof connector can be assembled on the output cable of HLG-120 to operate in dry/wet/damp or outdoor environment.

⊙ Cable Joiner

Suitable for 14AWG~22AWG

Up to four wires can be connected through this cable joiner by soldering or clamping by tools.
